Ear Gauge Size Card (actual size)

accurateonlineruler.com

Print at 100% scale ("Actual size"), not "Fit to page". Paper: A4. Check the 40 mm square with a real ruler before you trust the sizes.
Lay a plug flat on a circle: the size is the wearable surface that sits in the ear, not the flare. Gauge sizes show the usual metric jewelry size.

Scale check
40 mm x 40 mm

1 inch

Higher gauge numbers are thinner. After 00g, sizes are in inches. Shops round some sizes differently (00g is sold as 9.5 or 10 mm; 2g as 6 or 6.5 mm).
